

## Camera Control Panel

The MK4 panel has an excellent operator designed layout with an angled zoom rocker control and high reliability contactless Joystick.

Control of camera position, lens control and camera settings are all available depending on the configuration of the main Camserver controller.

A number of additional control functions have been added to the panel, giving the ability to extend the control capabilities with additions to the Camserver firmware.

The 19" panel is 3RU high, and 50mm deep.

Communication with the panel is via Ethernet 10 baseT.

A 5v DC power module is supplied with each panel.

## Camserver Television Production System

Developed as a complete solution to control Panasonic PTZ HD camera heads our system can handle 180 cameras and 16 Joystick camera control panels. Connects to Black Magic, Harris & Pro-Bel Matrix Routers to integrate the entire video production for the reality TV show requirements. Other cameras can be controlled, other matrices used, just enquire!
